

Module 12: Installation, Storage, and Compute with Windows Server

1. What two options are provided in the type of installation window during Windows Server 2016 installation?

Ans :- Two options:

- Server Core Installation
- Server with Desktop Experience (GUI)

2. Write the step How to configure server step by step?

Ans :- 1. Rename the server

2. Set static IP address

3. Configure DNS server

4. Set date and time

5. Enable Windows Update

6. Install required roles and features

7. Configure firewall settings

8. Join domain (if needed)

3. What are the Pre installation tasks?

Ans :- 1. Verify hardware requirements

2. Take backup of data

3. Check compatibility

4. Prepare bootable USB/DVD

5. Plan disk partitions

6. Keep product key ready

4. What are the Post installation tasks?

Ans :- 1. Install device drivers

2. Configure static IP

- ☐ Rename server
- ☐ Enable updates
- ☐ Install roles (AD DS, DNS, DHCP)
- ☐ Configure security policies

5. What is the standard upgrade path for Windows Server?

Ans :- ☐ Windows Server 2012 / 2012 R2 → 2016

☐ Windows Server 2008 → upgrade to 2012 → then 2016

6. What is the Physical structure of AD?

Ans:- ☐ Domain Controllers

☐ Sites

☐ Subnets

7. What is the Logical components of Active Directory?

Ans :- ☐ Forest

☐ Tree

☐ Domain

☐ Organizational Units (OUs)

☐ Users and Groups

8. What is the Full form Of LDAP?

Ans:- Lightweight Directory Access Protocol

9. What is the location of the AD database?

Ans :- C:\Windows\NTDS\NTDS.dit

10. What is child DC?

Ans :- A domain controller in a **child domain** under a parent domain

11. Explain the term forest in AD

Ans:- A forest is a **collection of multiple domains** sharing a common schema and trust relationship

12. What is Active Directory? Check all that apply.

Ans:- ✓ Windows-only implementation of a directory server

✓ Microsoft's implementation of a directory server

✓ LDAP-compatible directory server

13. When you create an Active Directory domain, what's the name of the default user account?

Ans:- Administrator

14. AD domain provides which of the following advantages?

Ans:- ✓ Centralized authentication

✓ Centralized management using GPOs

✓ More detailed logging

15. What are the minimum hardware requirements for installing Windows Server 2016?

Ans :- ☐ CPU: 1.4 GHz (64-bit)

☐ RAM: 512 MB (2 GB recommended)

☐ Disk space: 32 GB

☐ Network adapter required

16. Explain the different editions of Windows Server 2016 and their features.

Ans:- ☐ **Datacenter Edition**

- Unlimited virtualization
- Advanced features (Storage Spaces Direct, Shielded VMs)

☐ **Standard Edition**

- Limited virtualization (2 VMs)
- Basic features

☐ **Essentials Edition**

- For small businesses
- Max 25 users, no virtualization

17. Walk through the steps of installing Windows Server 2016 using GUI mode.

Ans:- 1. Boot from installation media

2. Select language and region

3. Click "Install Now"

4. Enter product key

5. Select **Server with Desktop Experience**

6. Accept license terms

7. Choose **Custom Installation**

8. Select disk and create partition

9. Click install

10. Set Administrator password

18. Describe the steps for installing Windows Server 2016 in Server Core mode.

Ans :- 1. Boot from installation media

2. Select language

3. Click install

4. Choose **Server Core option**

5. Select disk and install

6. Set Administrator password

7. Use command line (CMD/PowerShell) for configuration

19. How do you configure network settings during Windows Server 2016 installation?

Ans :- After installation:

1. Open **Network Settings**
2. Go to adapter properties
3. Set **static IP address**
4. Set subnet mask

5. Set default gateway
6. Configure DNS server

20. Explain the process of promoting a Windows Server to a domain controller.

Ans:- 1. Open **Server Manager**

2. Add role: **Active Directory Domain Services (AD DS)**

3. Click **Promote this server to a domain controller**

4. Choose:

- New forest OR existing domain

5. Set domain name

6. Set DSRM password

7. Complete installation and restart

21. What is Active Directory Domain Services (AD DS), and what are its key components?

Ans :- **AD DS (Active Directory Domain Services)** is a directory service used to manage users, computers, and resources.

Key components:

- Domain Controllers
- Database (NTDS.dit)
- Schema
- Global Catalog
- Replication

22. How do you create a new Active Directory user account in Windows Server ?

Ans :- 1. Open **Active Directory Users and Computers**

2. Right-click OU → New → User

3. Enter user details

4. Set password

5. Click finish

23. Explain the process of creating and managing Group Policy Objects (GPOs) in Windows Server 2016 or 2019.

Ans:- 1. Open **Group Policy Management**

2. Create new GPO

3. Link GPO to domain/OU

4. Edit settings (security, software, etc.)

5. Apply and update policy

23. What are Organizational Units (OUs) in Active Directory, and how do you use them?

Ans :- 1. OUs are containers used to organize users and computers

2. Used to apply GPOs and delegate control

25. Describe the process of delegating administrative privileges in Active Directory.

Ans :- 1. Open AD Users and Computers

2. Right-click OU → Delegate Control

3. Select user/group

4. Assign permissions

5. Finish wizard
