

1. Save running processes

`ps -u $USER > ~/my_processes.txt`

2. Find Spotify PID

Start Spotify (or another media player).

Run:

`top`

or

`pgrep spotify`

Record the PID.

3. Kill the process

`kill <PID>`

Verify:

`ps -u $USER | grep spotify`

or

`top`

4. Background/foreground jobs

`ping google.com &`

`jobs`

`fg`

Press Ctrl+Z to suspend.

Use `fg` to resume.

5. nice and renice

`nice -n 10 <command>`

or change an existing process:

`renice 10 -p <PID>`

Explanation: Increasing the nice value lowers the process priority, allowing more CPU time for other important tasks.
