

1. Create users and group

```
sudo useradd -m musicfan
sudo useradd -m moviebuff
sudo groupadd playlist
sudo usermod -aG playlist musicfan
sudo usermod -aG playlist moviebuff
```

2. Create shared folder

```
mkdir ~/spotify_shared
sudo chown :playlist ~/spotify_shared
sudo chmod 770 ~/spotify_shared
```

3. Create and secure file

```
touch ~/spotify_shared/top_songs.txt
sudo chown musicfan:playlist ~/spotify_shared/top_songs.txt
sudo chmod 640 ~/spotify_shared/top_songs.txt
```

4. Test access as moviebuff

```
su - moviebuff
cat /home/<username>/spotify_shared/top_songs.txt
nano /home/<username>/spotify_shared/top_songs.txt
```

Result:

- moviebuff can read the file because the group has read permission.
- moviebuff cannot edit or save changes because only the owner (musicfan) has write permission.
- Other users have no access because the file permissions are 640.
